

Pramen Sans

Definition The whole font family has well-balanced proportions adjusted to meet contemporary standards. Lowered uppercases are unobtrusive in longer texts and allow space for distinct diacritics; lowercase letters are slightly increased in size in order to aid legibility in smaller sizes. The accentuation of each typeface is determined by a basic geometric construction – a convexly bulging rectangle. This governs the appearance of the vast majority of the uppercase and lowercase letters. This is most visible in all of the rounded shapes, but it is also apparent in the diagonals (e.g. “K”, “R”). A seemingly mechanical approach and no-frills composition are disrupted by methods more associated with some of the humanist sans-serifs: all stems, diagonals, ascenders and descenders are terminated by perpendicular lines. This lends the font a friendly and lively appearance. While the inside outlines of the circular strokes consist of sharp edges and corners, the outside contours are soft and rounded. The result is a surprisingly calligraphic character of the type, reminiscent of flat brush strokes.

RHEUMATISM

Balneotherapy (from Latin: *balneum*) is the treatment of disease by bathing, usually practiced at spas. While it is considered distinct from hydrotherapy, there are some overlaps in practice and in underlying principles. Balneotherapy may involve hot or cold water, massage through moving water, relaxation or stimulation. Many mineral waters at spas are rich in particular minerals (silica, sulfur, selenium, radium) which can be absorbed through the skin. Medicinal clays are also widely used, which practice is known as fangotherapy.
